

Joel Freeborn

Lead / Product Designer

Executive summary

A creative and commercially minded designer with a proven track record of delivering products used by millions. I bring together design, technology, and business strategy to create meaningful experiences shaped by generational behaviours.

- A key contributor to **Verizon's Fios TV** ecosystem (set-top box, mobile web), within a cross-continental design team, implementing design enhancements that doubled the ARPU and drove 15% YoY reduction churn
- Served as part of the **TCS** leadership team transforming the 800+ global design practice
- Hands-on design for high-profile clients including **Cisco, Virgin,** and **Premier League**
- Sole designer for **Fantasy Premier League** app, topping the charts for 4 seasons running

verizon

Skills and capabilities

- Hands on UI design, delivering best in class design for multimillion design budgets and engagements
- UX research, usability testing, and data-informed iteration
- Design system leadership and brand expression at scale
- AI-first design and feature development
- Frontend development and prototyping
- Facilitating outcome-driven workshops and innovation sprints
- Building trusted relationships with senior stakeholders and cross-functional partners
- Driving design strategy and innovation in partnership with executive leadership
- Accessible and inclusive design best practices
- Advanced proficiency with Figma, Adobe Creative Suite, Jira, Webflow, and AI-powered design tools

Leading the future of TV

Design leadership

UI design

Design system

I was the lead designer for Verizon's Fios TV ecosystem (TV, mobile, and web), unifying experiences, driving retention, and shaping how the next generation consumes television.

- Hands-on design for optimisation and innovation
- Unifying fragmented designs across products and design system libraries
- Partnered with product owners, brand, and dev teams to align roadmaps and raise experience quality
- Reduced churn by 15% YoY through design improvements, bundling strategy, and content discovery
- Doubled ARPU by creating new monetisation pathways

Innovation highlight – reducing the effort required to decide what to watch

As with most TV and subscription products, discovery remains one of the biggest challenges against a backdrop of constraints such as navigating a large catalogue on a remote-first interface.

The solution; ‘Help Me Decide’ – a lightweight, statement-based way to guide decisions with minimal input.

- Hands-on UI design and prototyping
- Formulating hypothesis-based test plans for multiple rounds of user testing
- Close partnership with development for handover and QA

Managing a complex cross-platform design system

The Fios TV ecosystem is made up of three core products (Fios TV, Fios TV+ and Stream TV) across six different platforms (set-top-box, Apple TV, FireTV, iOS, Android, and responsive web).

Having a well-structured, governable and scalable design system is imperative for consistency and efficiency.

Our setup starts with pulling master styles from Verizon's own Brand Design System. These feed into two separate master libraries; one for TV and another for mobile and responsive web.

Partnering with Apple to deliver a best-in-class iOS product for Cisco Webex

UI design

Collaboration

Component libraries

Designed a fully native iOS experience for Cisco's Webex app, working directly with Apple's Experience team (who rely on Webex internally) to set a new standard for enterprise communication.

- Hands-on UI design, building scalable component libraries
- Delivered a polished experience in just two months
- Collaborated with Cisco stakeholders and Apple's UX team to define best practices

Redesigning the fan experience for Bally Sports across web, mobile, and TV

Design leadership

UI design

When Bally Sports acquired Fox Sports, they needed to replace the entire fan experience across platforms. I led workshops with stakeholders to map complex customer journeys across US regional sports networks, shaping a seamless cross-platform ecosystem.

- Defined end-to-end fan journeys through client workshops
- Delivered new apps across web, mobile, and TV
- Achieved 10M+ downloads within the first two years

Creating a new digital home for the Virgin Group

UI design

Collaboration

User research

At Foolproof, I was part of the team redesigning Virgin.com, creating a modern, scalable home for the Virgin Group. The project involved migrating large editorial archives and company directories into a new, user-friendly information architecture that worked seamlessly across breakpoints.

- Tackled complex IA challenges
- Designed a responsive experience
- Conducted iterative rounds of user testing

Delivering four consecutive chart-topping seasons for Fantasy Premier League

UI design

Stakeholder management

Dev collaboration

As the sole product designer, I owned the end-to-end design process and worked directly with the development agency to bring Fantasy Premier League to life across multiple platforms.

- Designed the first ever mobile version of the game
- Delivered experiences across iOS, Android and Windows (mobile, tablet, watch, desktop)
- Owned the entire end-to-end design process, from UX flows to final UI and QA
- Reached 4M+ players each season, topping the app charts
